Do the following series converge or diverge?

1.

$$\sum_{n=3}^{\infty} \frac{\mathbf{e}^{4n}}{(n-2)!}$$

$$L = \lim_{n \to \infty} \left| \frac{a_{n+1}}{a_n} \right| = \lim_{n \to \infty} \left| a_{n+1} \frac{1}{a_n} \right| = \lim_{n \to \infty} \left| \frac{e^{4(n+1)}}{(n+1-2)!} \frac{(n-2)!}{e^{4n}} \right|$$
$$= \lim_{n \to \infty} \left| \frac{e^{4n+4}}{(n-1)!} \frac{(n-2)!}{e^{4n}} \right| = \lim_{n \to \infty} \left| \frac{e^{4n+4}}{(n-1)(n-2)!} \frac{(n-2)!}{e^{4n}} \right| = \lim_{n \to \infty} \left| \frac{e^4}{n-1} \right| = 0$$

We can see that L=0<1 thus by the Ratio Test the series converges.
